

OXIO® Health, Inc. Announces Licensing 30th Patent

“Event Detection And Management System”

GREENACRES, FLORIDA, USA (May 19, 2022) – OXIO Health, Inc.® (“OXIO”) announces the addition of a new patent to its family of patents and other intellectual property. This new patent, number 10,552,608, contains 22 separate claims, supporting, interacting, and expanding the existing 29 patents in OXIO’s patent portfolio. This patent addresses the processes for the management of data, allocation of resources, including previous claims relating to Episodic Social Networks™ that as the patent’s states:

“wherein the plurality of interconnected operations is associated with standard procedures for one or more medical conditions, and wherein at least one of the plurality of roles is associated with the one or more medical conditions.”

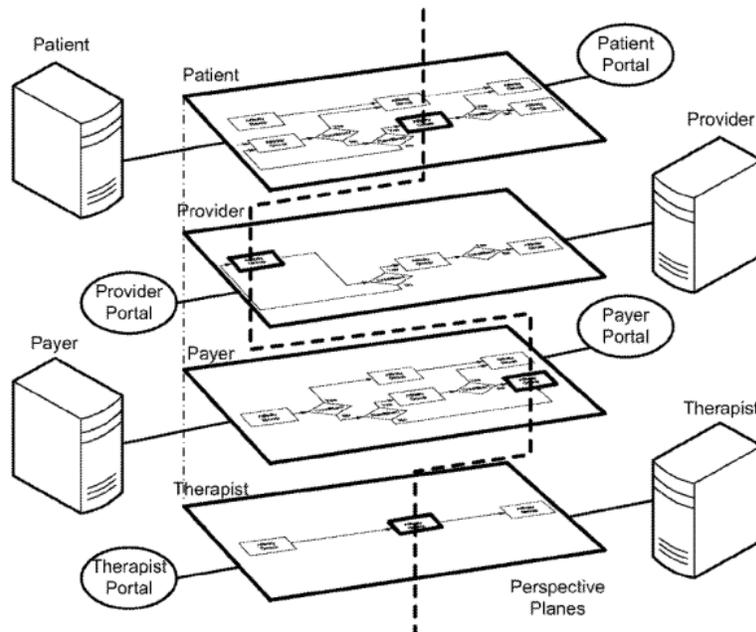

Though this patent was conceived for use in healthcare, in particular, coordinating patient care, the claims are broad enough to allow for many applications in addition to healthcare. OXIO expects to pursue all opportunities for use of this and the other patents in its portfolio.

Carl L. Larsen, Executive Vice President, and COO of OXIO Health Inc., commented on this long-awaited development, “we are very excited by the award of this important patent that focuses on one of the biggest problems in healthcare - the lack of meaningful and actionable communications. This newly licensed patent bridges, by design, the flow of actionable data from providers, payers, caregivers, and physicians in a collaborative environment and with optimum use of resources. This is how we believe healthcare can only be changed.”

OXIO expects to continue expanding its patent portfolio, as well as to design and build platforms that use some of the unique features in its IP portfolio for both the consumer

and the provider of care, in novel and advanced ways as it continues to drive towards a world where we realize “*technology-infused care*™.”

Figure 1 of Patent:

Mr. Larsen further commented, “The licensing of this new patent fills in another important piece in our portfolio of patents and Intellectual Property. Collectively, these patents and IP define our vision of a unique healthcare ecosystem beginning with the infusion of technology into healthcare processes. This new patent brings another valuable piece to our portfolio because so much of healthcare is not only “episodic,” but a substantial amount of communication and coordination is often required between the stakeholders.”

Less than 10 years ago, there was a belief among many that the modern Electronic Medical Record (EMR) would bridge this gap by moving patient records from paper to digital content and allow patient records to be more easily accessible. However, what we have found is quite nearly the opposite. The EMR has resulted in siloed information which in turn has exacerbated the problems of data accessibility and communications between providers and providers and patients. The EMR has performed very poorly at best to meet these expectations.

What if the patient was the center of the universe? We believe they should be. With our core understanding, gained from designing and operating our own patented EMR, PWeR® (Personal Wellness *electronic* Record®), we see both the value of data and communications. Sadly, neither are being managed sufficiently well – as an industry we must do better! We see a transformation beginning now and accelerating over the next five (5) years, that will place more information in the hands of the consumer along with the migration of patient records from facilities-based EMRs to consumers controlling the use of their own data. This is why we see everything as “personal” to the consumer or totally consumer/patient-centric.

About OXIO Health® , Inc.

OXIO Health, Inc. is a new, multifaceted healthcare innovations company that realized medical care and medical technology had to be merged into a new, 21st century platform, to bring more value and improve quality; much of which remains elusive in healthcare today. OXIO's management brings deep, hands-on experience in working for over 30 years in nearly every segment of healthcare delivery, technology, and facilities management. Healthcare in the U.S. today is a US\$4.3 trillion industry with expectation to reach over US\$6 trillion by 2030, as 10,000 new baby boomers reach retirement age daily through this period. We have assembled the best systems in our Portfolio of Companies driven to be change agents in this industry that has resisted change for over 50 years; however, lessons learned from the COVID-19 pandemic – patients, providers, and payors – we see a new receptiveness of the needed changes in the delivery of care.
